JVC[®]

The Perfect Experience

2009-2010

JVC Recording Media Catalogue

NEW DVD-R / DVD+R & CD-R

High Performance & Compatibility

MADE IN JAPAN

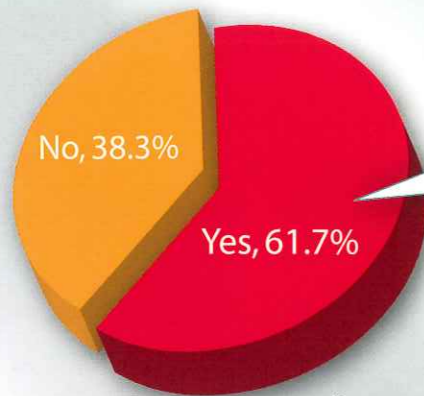

Here comes new JVC media

We are now the world's only fully-integrated supplier of recording media products, offering a full range of capabilities, including R&D, mass-scale state-of-the-art manufacturing, advanced marketing, and sales. The company's unique position in the recording media industry allows it to provide customers with enhanced value, leading-edge technology, and advanced products, along with consistent product quality and reliability.

Research Results : Consumer Thoughts on DVD-R

Have you experienced any problems on using DVD recordable media, such as failure in writing and / or reading, etc... ?

(n=900/ survey in Germany, UK and France / multiple answers)

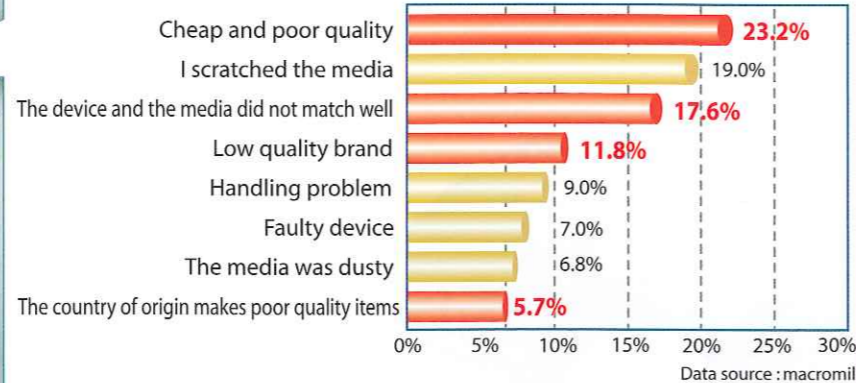

Data source : macromill

Studies show that 62% of consumers have had some problems with the media.

What do you think is the main cause of the problems?

(n=900/ survey in Germany, UK and France / single answer)

Data source : macromill

58% of consumers believe the problems were caused by the media themselves.

For those consumers, JVC is the solution because:

Unlike other manufacturers, JVC controls all aspects of its manufacturing, including materials, equipment, and technology.

That means that JVC has ultimate control over the quality and purity of raw materials, the manufacturing process, and shipping.

JVC's media has the highest compatibility with recording and playback devices because device manufacturers use JVC media as a testing and quality benchmark for manufacturing.

Made in JAPAN

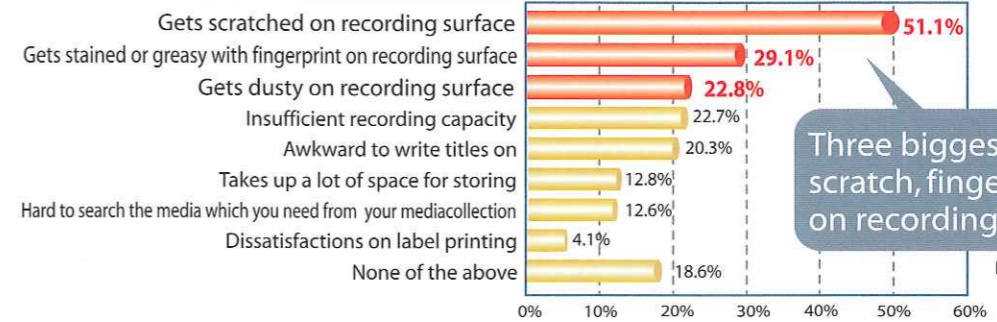

Try JVC and you will find out...

Archival-Grade

Archival-Grade that protects your important data.

Dissatisfaction about optical discs (n=900/search in Germany,UK and France/multiple answers)

Three biggest complaints are ; scratch, finger print and dust on recording surface

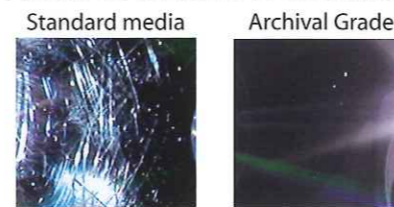

Data source : macromill

This unique feature of the JVC Archival Grade protects discs from dust compared to standard discs.

Resists scratch

150x more Scratch resistant¹

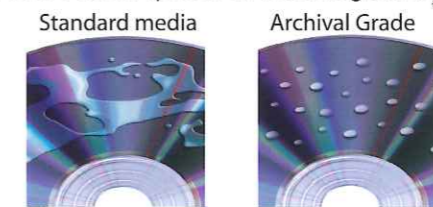

Scratch test : Picture of disc surface

Resists finger print

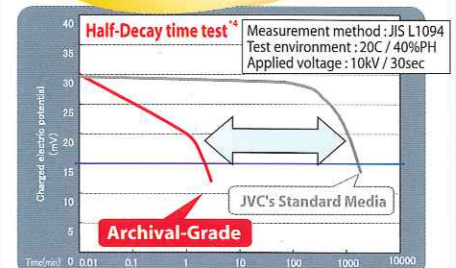

7x more finger print resistant²

Picture of oil repelled on recording surface³

Resists dust

1000x more Dust resistant⁴

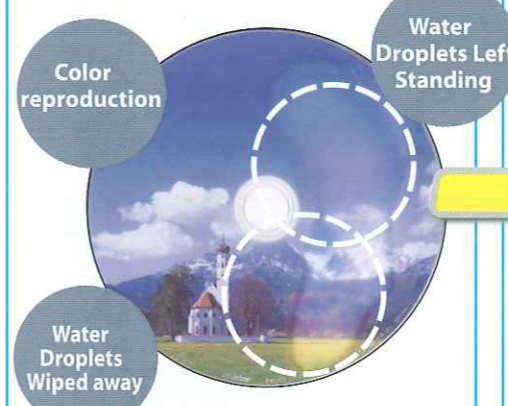

¹JVC internal test (Measurement method : JIS K7204) ²JVC internal test (Measurement method : JIS K2246) ³Ingredient of finger print is fat. ⁴JVC internal test, test method : Measures the time when electric load becomes half.

Photo Grade

Photo Grade brings you a bright and water resistant printing.

Standard Inkjet Media

microscopic level

The printable surface of standard media is rough at the microscopic level

Photo Grade

High water-resistance & brilliance

nanoscopic level

The printable surface of Photo Grade is designed to be smooth even at the nanoscopic level

Reducing surface swelling from ink droplets

- Inkjet Dye or Pigment is trapped at the surface layer on standard inkjet media
- On Photo Grade Media, a solvent allows dye or pigment to penetrate to the lower layer

Quick drying

High Resolution

Precise Color Reproduction
